Pico 2 mini OS File Manager

Pico 2 mini OS · October 27, 2026

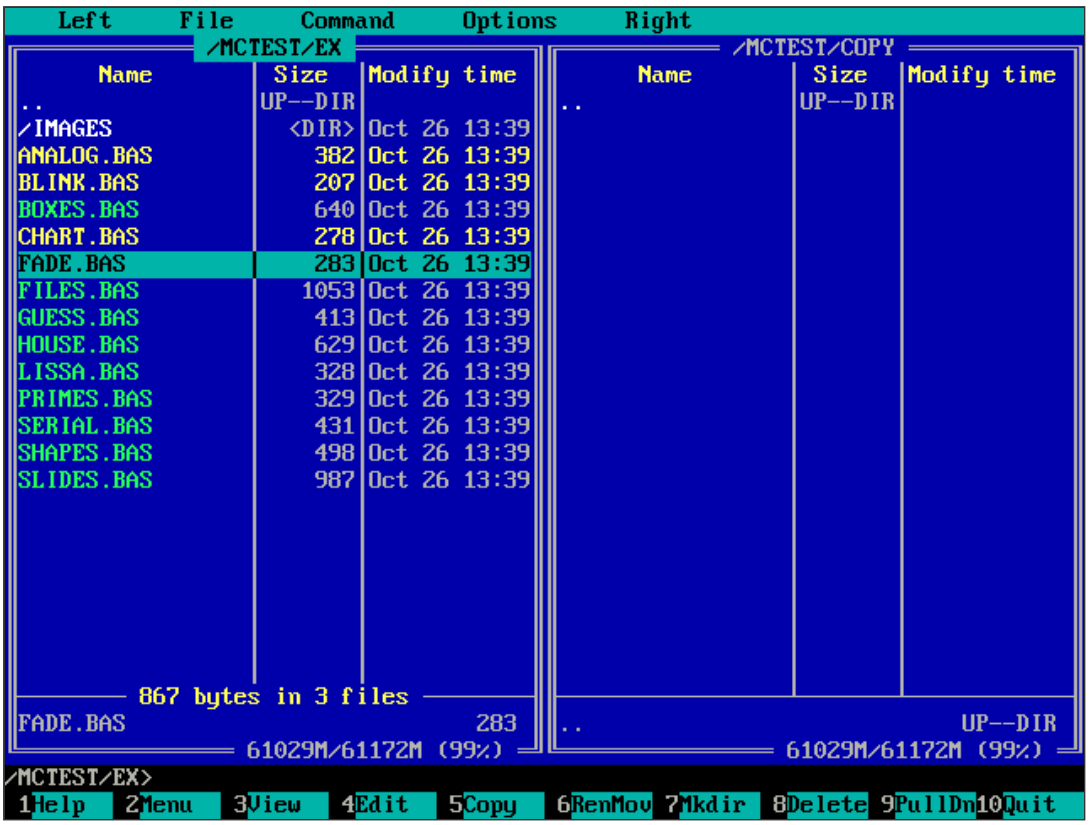

Contents

The file manager

`mc [left] [right]` is a file manager in the style of Midnight Commander: two panels of files, copying, moving, deleting, viewing and editing, with menus and the mouse.

The file manager

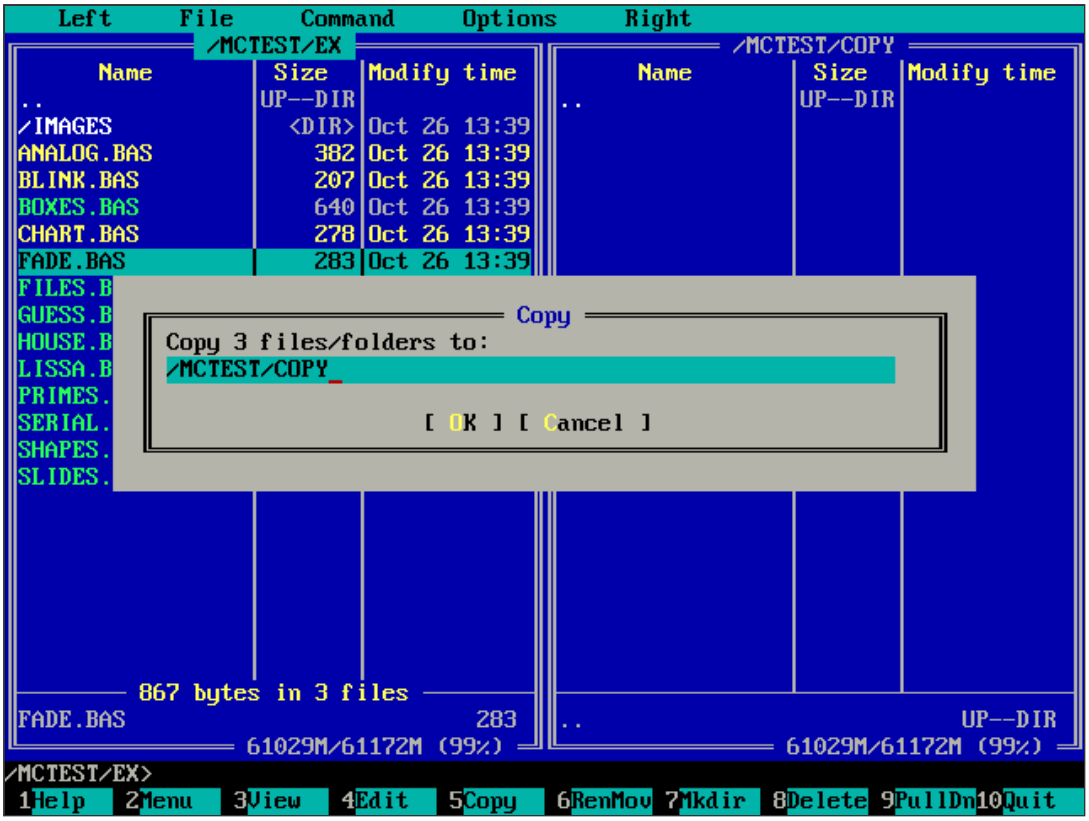

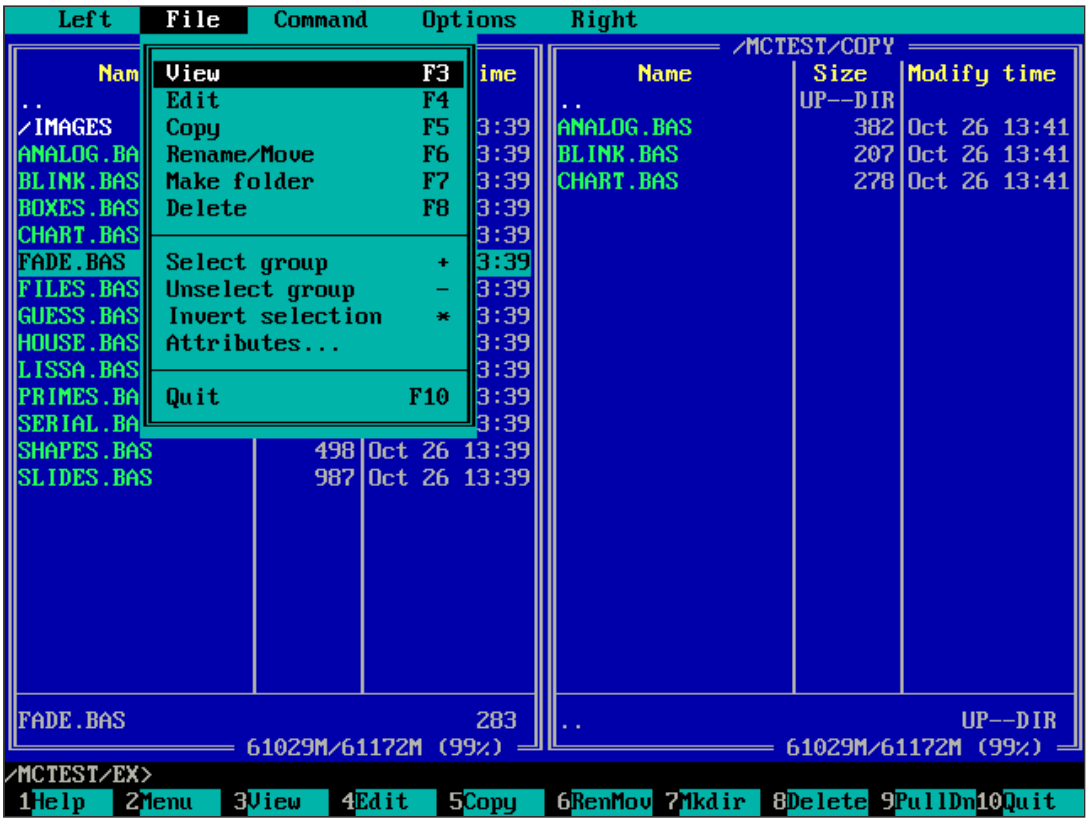

`mc` shows two panels of files, like Midnight Commander or Norton Commander, with CP437 line graphics. It works on the USB drive and on network shares. `mc /EXAMPLES /NET` opens the panels on those folders; otherwise they come back as they were left (saved in `/MC.INI`).

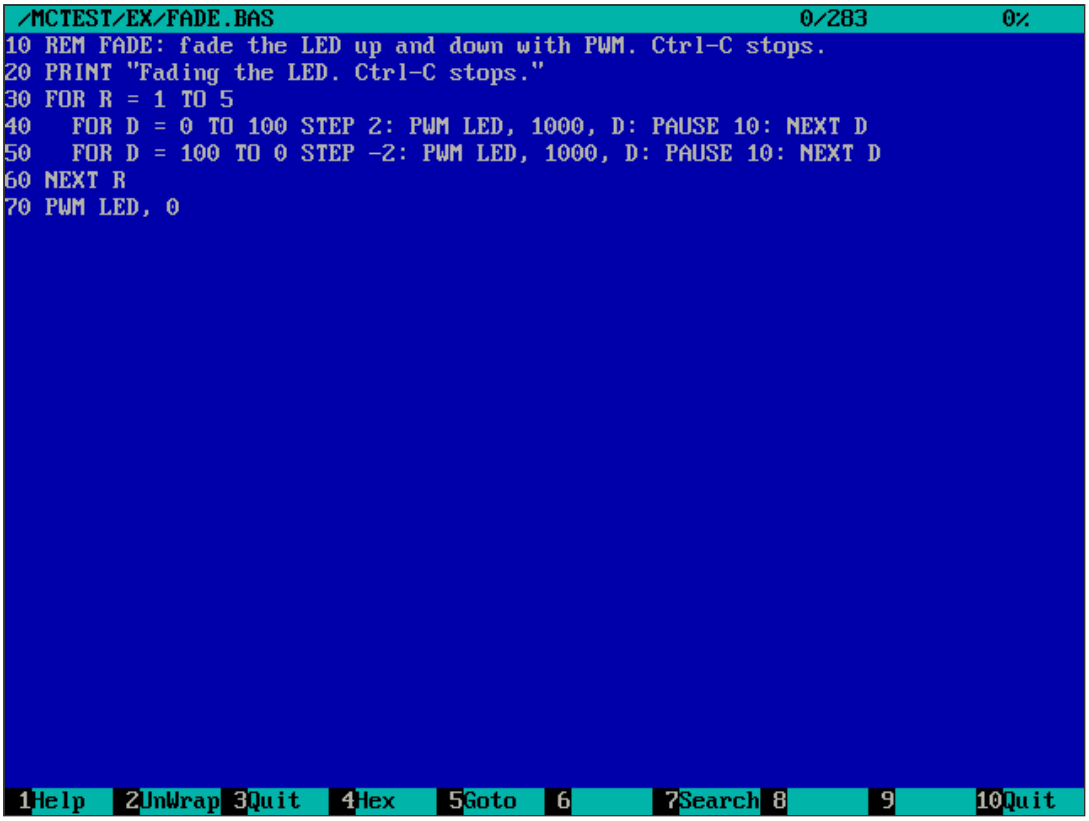

Key	Action
Up, Down, PgUp, PgDn, Home, End	Move in the panel (Left/Right too in Brief mode)
Tab	The other panel
Enter	Open a folder; run a `.BAS` in BASIC; show a picture; view other files. With a command typed: run it
Insert, Ctrl-T, Space (command line empty)	Mark a file and move down
`+` / `-` / `*` (command line empty)	Mark files matching a pattern / unmark / invert
F1	Help
F2	User menu (`/MC.MNU`)
F3	View (text or hex, search)
F4	Edit in the text editor
F5	Copy the marked files (or the current one) to the other panel
F6	Rename or move
F7	Make a folder

Key	Action
F8	Delete (asks; folders with everything in them after a second question)
F9	Menus: Left, File, Command, Options, Right
F10	Quit
Esc then 1..9, 0	F1..F9, F10 (for keyboards without F keys)
Ctrl-S	Quick search: type the start of a name (Ctrl-S again: next)
Ctrl-O	Show the shell screen (any key returns)
Ctrl-U	Swap the panels
Ctrl-R	Read the folders again
Alt-Enter (or Esc Enter)	Put the current name in the command line
Alt-C	Quick cd: type a folder to go to
Alt-?	Find file
Alt-T	Listing mode: Full, Brief, Long
Alt-H	Show or hide hidden and system files

- **Command line:** anything typed goes to the line at the bottom; Enter runs it as a shell command in the active panel's folder, on the shell's screen, then the panels come back (Ctrl-O shows what it printed). `cd` there moves the panel.
- **Listing modes** (Left/Right menus): Full (name, size, date), Brief (two columns of names), Long (the whole width, with attributes), and Info (the other panel's current file: size, date, attributes, the drive's free space). Sort by name, extension, size, time or not at all, and reverse.
- **Copy and move** show a progress box (the file and the total) and ask before overwriting: Yes, No, All, None, Older (only if the existing file is older), Abort. A folder can't be copied into itself. Esc or Ctrl-C stops.
- **Command menu:** Find file (a name pattern, optionally text inside the files, from a folder down; the results are a list to jump to), Swap panels, Compare folders (marks the files that are missing, newer or a different size in the other panel), Shell screen, Quick cd, Edit user menu.
- **Options menu:** confirm delete, confirm overwrite, confirm exit, show hidden files, and Save setup. The panels' folders, modes and sort orders and the options are saved in `/MC.INI` when mc ends.
- **File menu:** also Attributes (read-only, hidden, system, archive, on the USB drive).
- **User menu (F2):** `/MC.MNU`, lines of `Title|command`, where `%f` is the current file, `%n` its name, `%d` the folder and `%o` the other panel's folder. If there is none, mc offers to write one with examples.
- **Viewer (F3):** F2 wrap or not, F4 hex or text, F5 go to an offset or a percentage, F7 or `/` search (any case), `n` next, F3/F10/Esc/`q` back. Files up to 4 MB are read whole; bigger ones show their first 4 MB.
- mc draws on the HDMI screen only (the serial terminal sees the shell screen, and its keys work). Starting mc from mc's own command line isn't allowed.

- **Mouse:** click a file to choose it, double-click to open it, right-click to mark it; the wheel scrolls the panel under the pointer. Click the menu bar to pull a menu down, and the F-key bar at the bottom to press that key. The pointer is a cell in reversed colours. Dialogs use the keyboard.
